How to use calculator

Name: زياد بديع السعيد البنا

ID:18010717

Important notice:

- Calculator worked on : <http://localhost:8080/>
- Springboot server is in folder called “demo”
- Vue Cli server is in folder called “calculator”

Specifications for the app:

- The calculator support multi operations but it does each single operations in one step like: $3+5-7$

It will do $3+5$ first then the result appear on screen as first number then u can add $-$ and 7 then it will use the result of last operation and value you entered.

- Calculator doesn't support one digit or sign deleting
- For single operations like(power, Square root, inverse and toggle) u can do it for a single number or result of equation but in result of equation case you have to press $(=)$ before you use it
- C and Ce buttons are doing the same function which clear all the operations and screen
- Calculator protect user from wrong equation as it accept only one operation at time.
